Title Simulate Data from State Space Models

Version 1.0.1.9000

Description Provides a streamlined and user-friendly framework
for simulating data in state space models,
particularly when the number of subjects/units (n) exceeds one,
a scenario commonly encountered in social and behavioral sciences.

`OU2SSM` *Convert Parameters from the Ornstein–Uhlenbeck Model to State Space Model Parameterization*

Description

This function converts parameters from the Ornstein–Uhlenbeck model to state space model parameterization. See details for more information.

Usage

```
OU2SSM(mu, phi, sigma_sqrt, delta_t)
```

Arguments

`mu`	Numeric vector. The long-term mean or equilibrium level ($\boldsymbol{\mu}$).
`phi`	Numeric matrix. The rate of mean reversion, determining how quickly the variable returns to its mean ($\boldsymbol{\Phi}$).
`sigma_sqrt`	Numeric matrix. Cholesky decomposition of the matrix of volatility or randomness in the process ($\boldsymbol{\Sigma}$).
`delta_t`	Numeric. Time interval (δ_t).

Details

The state space parameters as a function of the Ornstein–Uhlenbeck model parameters are given by

$$\boldsymbol{\beta} = \exp\left(-\boldsymbol{\Phi}\Delta_t\right)$$

$$\boldsymbol{\alpha} = -\boldsymbol{\Phi}^{-1}\left(\boldsymbol{\beta} - \mathbf{I}_p\right)$$

$$\mathrm{vec}\left(\boldsymbol{\Psi}\right) = \left\{\left[\left(-\boldsymbol{\Phi} \otimes \mathbf{I}_p\right) + \left(\mathbf{I}_p \otimes -\boldsymbol{\Phi}\right)\right]\left[\exp\left(\left[\left(-\boldsymbol{\Phi} \otimes \mathbf{I}_p\right) + \left(\mathbf{I}_p \otimes -\boldsymbol{\Phi}\right)\right]\Delta_t\right) - \mathbf{I}_{p \times p}\right]\mathrm{vec}\left(\boldsymbol{\Sigma}\right)\right\}$$

Value

Returns a list of state space parameters:

- `alpha`: Numeric vector. Vector of intercepts for the dynamic model (α).
- `beta`: Numeric matrix. Transition matrix relating the values of the latent variables at time `t - 1` to those at time `t` (β).

- eta: A t by p matrix of values for the latent variables.
- x: A t by j matrix of values for the covariates.
- time: A vector of discrete time points from 1 to t.
